

ANAS MOHAMMED

Offensive Security Researcher · Red Team Operator · Malware Developer
Cairo, Egypt · +201062907978 · skoveit@proton.me · Portfolio · GitHub · LinkedIn

PROFILE

Offensive Security Engineer who operates across the full attack lifecycle, from source code auditing and vulnerability research to implant development and red team operations. Understands systems at the lowest level, the primitives that defenses are built on top of.

CORE SKILLS

Web Application & API Pentesting

- Race conditions, SSRF, SSTI, XXE, logic flaws
- GraphQL introspection & injection attacks
- OAuth 2.0 / JWT - token forgery & misuse

Active Directory & Red Team

- Kerberoasting, AS-REP roasting, DCSync, ACL abuse
- Attack path analysis & privilege chain mapping
- DACL manipulation & GPO abuse

Malware Development & Evasion

- Custom implants in C/C++, Go, Assembly
- EDR & AV evasion, syscalls, process injection
- Shellcode staging & reflective loading

Security Research

- Source code auditing for novel vulnerabilities
- zero-days in nHost, tempo, sliver (CVEs)
- Bug Bounty - HackerOne & Intigriti

Software Development

- Go / C / C++ / Python / Rust / Assembly
- Competitive programmer (Codeforces)
- Design patterns & system architecture

Systems & Infrastructure

- Windows Internals - kernel, memory, NT APIs
- Linux internals & privilege escalation
- Networking - protocol-level attack chains & analysis

EXPERIENCE

Nhost - Security Engineer (Full-Time)

2026 – Present

- Own the entire security posture of the Nhost platform, covering auth, storage, dashboard, and cloud infrastructure.
- Secure a production BaaS platform where one vulnerability can **expose thousands** of developer teams worldwide.
- Serve as the internal point of contact for all vulnerability triage, security reviews, and remediation across the stack.

Independent Security Researcher

2025 – 2026

- Bug bounty research on HackerOne & Intigriti
- **CVE-2026-41574** | **CVE-2026-34200** | **CVE-2026-32941** | **CVE-2026-34227** | **CVE-2026-29781**

PROJECTS

Sliver C2 Framework

2025 – 2026

- Ranked **2nd** highest contributor to Bishopfox/Sliver (past year); designed and integrated numerous features.

SkoveNet

2024 – Present

- Engineered fully decentralized C2 architecture to simulate resilient APT ops with no single point of failure.
- Modular post-exploitation: automated persistence, covert channels, lateral movement support. (Github – Docs)

CERTIFICATIONS & TRAINING

OSCP

Offensive Security Certified Professional

Labs Completed & Exam In Progress

CRTO

Certified Red Team Operator - Red Team Ops

Labs Completed & Exam In Progress

Maldev Academy

Advanced Malware Development & EDR Evasion

Completed

PortSwigger WSA

Web Security Academy - 100% of Labs

Completed

EDUCATION

B.Sc. Computer Engineering - New Mansoura University

Expected 2027
